Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on February 20, 2004 has been entered.

Comment on Submission(s)

2. The amendment filed February 20, 2004 has been entered. The amendment is not in compliance with 37 CFR 1.121 not least because of 37 CFR 1.121(c), 37 CFR 1.121(c)(2), and 37 CFR 1.121(c)(3) and could have been held non-responsive on that basis alone.

3. The new declaration submitted February 20, 2004 is acknowledged.

4. Applicant's arguments filed February 20, 2004 have been fully considered but they are not persuasive. The arguments do not comply with 37 CFR 1.111(b) as required by a reply in a request for continued examination under 37 CFR 1.114(c) because arguments have not been presented pointing out the specific distinctions believed to render the claims patentable over *any applied references* (emphasis added) in view of the application of the Beasley *et al.* and Murphy *et al.* references to claims reciting any variation of "cuttings bed buildup" and "kick detection." The arguments do not comply with 37 CFR 1.111(c) because applicant has not shown how the amendments (the new "deriving" step of claim 1) avoid the references.

5. This application is in condition for allowance except for the presence of claims 5 and 6 to species non-elected without traverse. Accordingly, claims 5 and 6 have been cancelled.

Reasons for Allowance

6. The following is an examiner's statement of reasons for allowance: with respect to independent claim 1, the method of Holenka *et al.* derives a density measurement from the recorded measurement signals (Fig. 9) so the recital thereof in the claim as amended is incapable of distinguishing the claim from this applied reference; with respect to independent claims 1, 10, and 15, the issue is whether Holenka *et al.* appreciates that the returning energy (or resulting gamma ray) is a result of interaction with the mud mixture in borehole 12 (column 6, lines 45-55) as well as with the formation as disclosed; to the extent that applicant's specification explicitly uses the tool of Holenka *et al.* to implement the method (see paragraph [0060]) this property might be considered inherent, but obviousness cannot be predicated on what is not known at the time an invention is made, even if the inherency of a certain feature is later established, *In re Rijckaert*, 9 F.2d 1531, 28 USPQ2d 1955 (Fed. Cir. 1993), see MPEP § 2141.02; the sole suggestion of Mathis for measuring signals in response to returning energy from the mud mixture is to move the instrument 10 away from the wall of the wellbore (column 7, lines 17-20) which is inconsistent with the requirement of claims 1 and 10 of Holenka *et al.* that a "bottom contact point" be determined; with respect to independent claim 15, upon reconsideration, while the instrument 10 of Mathis is fully capable of determining the "photoelectric effect" of the earth formation (column 4, lines 23-24) there is no suggestion to determine the "photoelectric effect" of the mud mixture; with respect to new claims 24 and 25, while Beasley *et al.* explicitly compares the density of the mud with that of the drill string (column 1, lines 37-39) there is no such comparison with the cuttings which build up in the absence of a mud current (column 1, lines 40-42).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
